                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pragments generated from the suppression Subtractive hybridization of E. coli EC317 from E. coli K-12 MG1655 using the PCR-Select bacterial genome subtraction kit (Clontech). The fragments were cloned into plasmid pTAGV vector using the Advantage PCR cloning kit (Clontech). E. coli EC317 is a strain which is pathogenic for poultry."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TCGAGCGGCCGCCCGGGCAGGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pocar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determination of this BaC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Maron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic Strain y2; cn bw sp, the same strain used for the BDGP's pl and ECT libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

This GSS is part of a random genomic sequencing program of thirteen Yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
                                                                                                                                                 lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces bansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  de-Montigny, J., Dujon, B., Durrens, P., Lepingle, A., Llorente, B., Malpertuy, A., Neuveglise, C., Ozier-Kalogeropoulos, O., Potier, S., Saurin, W., Tekaia, F., Tolon, J., Ozier-Kalogeropoulos, O., Potier, S., Saurin, W., Tekaia, F., Tolon, J., Nicoke, C., Wesolowski-Louvel, M., Wincker, P. and Weissenbach, J.

Genomic exploration of the hemiascomycetous yeasts: 1. A set of yeast species for molecular evolution studies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Bon,E., Neuveglise,C., Lepingle,A., Wincker,P., Artiguenave,F.,

This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.ccs.fr

The sequence (hap gene) includes putative -10 and -30 sequences and a putative rho-independent terminator 3' to the hap stop codon. The terminator contains interrupted inverted repeats, with the potential for corming a hairpin structure containing a loop of 3 bases and a stem of 8 classes, followed by a stretch rich in T residues. The gene product is first synthesised as a preprotein, which is transported to the periplasm, followed by insertion of the C-terminal beta-domain into the outer membrane, possibly forming a pore, and export of the N-terminal fragment through the outer membrane, followed by autoproteolytic cleavage and secretion of the mature protease, leaving an outer membrane protein cragment. The gene may be inserted in a vector and expressed in composition of the mature protease, leaving an outer membrane protein cragment. The gene may be inserted in a vector and expressed in the combinant vaccine. The gene combinant host cells, for use as a recombinant vaccine. The gene combinant vaccine and expressed in the combinant vaccine in the combinant vaccine in the combinant vaccine.

8x20202020202020202020202020 translation regulatory nucleic acid operably linked to the HAP nucleic acid, producing HAP) by culturing a host cell transformed with the expression vector, a composition comprising a pharmaceutical carrier and HAP, inducing an immune response in a patient by administering the composition, a composition comprising an antibody capable of binding to HAP (or to a peptide selected from 35 peptide sequences appearing as ADA09399-ADA09993), and an antibody capable of binding to the peptides. The Haemophilus adhesion and penetration (HAP) protein is useful as a vaccine for prophylactic or therapeutic treatment of an H. influenzae infection (e.g. influenza), in generating an immune response in a patient, and in generating antibodies to the HAP protein. The actibodies may be used to diagnose the presence of H. influenzae infection in a sample or patient, in passive immunisation treatments, and to purify or separate HAP proteins or the H. influenzae organism from a sample. The The invention relates to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09350, ADA09352 and ADA09354 encoded by nucleic acid appearing as ADA09349, ADA09351, ADA09353, ADA09355 and ADA09357. Also included are a recombinant nucleic acid that will hybridize under stringency conditions to the nucleic acid detailed above, an expression vector comprising transcriptional and present sequence is the H. influenzae HAP gene.

The invention relates to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09348, ADA09352 and ADA09349, ADA09352 and ADA09354 encoded by a nucleic acid appearing as ADA09349, ADA09351, ADA09355 and ADA09357. Also included are a recombinant nucleic acid that will hybridize under stringency conditions to the nucleic acid detailed above, an expression vector comprising transcriptional and
may be used to diagnose the presence of H. influenzae infection in a sample or patient, in passive immunisation treatments, and to purify or separate HAP proteins or the H. influenzae organism from a sample. The present sequence is a HAP gene from a strain of H. influenzae.
                                                                                                                                                                                                                 vaccine for prophylactic or therapeutic treatment of an H. influenzae infection (e.g. influenza), in generating an immune response in a patient, and in generating antibodies to the HAP protein. The antibodies
                                                                                                                                                                                                                                                                                                                                                                               composition, a composition comprising an antibody capable of binding to HAP (or to a peptide selected from 35 peptide sequences appearing as ADA0359-ADA0933) and an antibody capable of binding to the peptides. The Haemophilus adhesion and penetration (HAP) protein is useful as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      expression vector, a composition comprising a pharmaceutical carrier and HAP, inducing an immune response in a patient by administering the

JT 6 3357 ADA09357 standard; DNA; 4828 BP.

ADA09357;

06-NOV-2003 (first entry)

Haemophilus HAP protein gene from strain 1396B.

ds; Haemophilus adherence and penetration protein; HAP; gene; antibacterial; immunostimulant; vaccine; Haemophilus influenza infection; influenza.

X Haemophilus influenzae; strain 1396B.

The present sequence is a HAP gene from a strain of H. influenzae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 infection (e.g. influenza), in generating an immune response in a patient, and in generating antibodies to the HAP protein. The antibodies to the used to diagnose the presence of H. influenzae infection in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             composition, a composition comprising an antibody capable of binding to HAP (or to a peptide selected from 35 peptide sequences appearing as ADA09359-ADA09393), and an antibody capable of binding to the peptides. The Haemophilus adhesion and penetration (HAP) protein is useful as a vaccine for prophylattic or therapeutic treatment of an H. influenzae infortion (a stifflator) interapeutic treatment of an H. influenzae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09345, ADA09352 and penetration protein (HAP) appearing as ADA09349, ADA09351, ADA09354 ancoded by a nucleic acid appearing as ADA09349, ADA09351, ADA09353, ADA09355 and ADA09357. Also included are a recombinant nucleic acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant Haemophilus adhesion and penetration protein, useful as a vaccine for prophylactic or therapeutic treatment of a Haemophilus influenzae infections, in generating antibodies for passive immunization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 20
P-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression vector, a composition comprising a pharmaceutical carrier and HAP, inducing an immune response in a patient by administering the

expression vector, a composition comprising a pharmaceutical carrier and HAP, inducing an immune response in a patient by administering the composition, a composition comprising an antibody capable of binding to HAP (or to a peptide selected from 35 peptide sequences appearing as ADA09359-ADA0933), and an antibody capable of binding to the peptides. The Haemophilus adhesion and penerration (HAP) protein is useful as a vaccine for prophylactic or therapeutic treatment of an H. influenzae infection (e.g. influenza), in generating an immune response in a patient, and in generating antibodies to the HAP protein. The antibodies may be used to diagnose the presence of H. influenzae infection in a
                                                                                                                                                                                                                                                                                                                                                            detailed above, an expression vector comprising transcriptional and translation regulatory nucleic acid operably linked to the HAP nucleic acid, producing HAP) by culturing a host cell transformed with the
                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a new recombinant Haemophilus adhesion and penetration protein (HAP) appearing as ADA09345, ADA09352 and ADA09345 and ADA09355 and ADA09355 and ADA09355 and ADA09357. Also included are a recombinant sucleic acid that will hybridize under stringency conditions to the nucleic acid acid that will hybridize under stringency conditions to the nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New recombinant Haemophilus adhesion and penetration protein, useful as a vaccine for prophylactic or therapeutic treatment of a Haemophilus influenzae infections, in generating antibodies for passive immunization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;

Ś D) Ş В В Ş δ よ S 멍 Ś ঠ S Вb 8 g 밁 CC penetration protein (HAP) appearing as ADA09348, ADA09352 and CC ADA09354 encoded by a nucleic acid appearing as ADA09349, ADA09351, ADA09353, ADA09355, ADA09355, ADA09355, ADA09355, ADA09351, CC ADA09354, ADA09355, ADA09355, ADA09357, Also included are a recombinant nucleic acid detailed above, an expression vector comprising transcriptional and CC translation regulatory nucleic acid operably linked to the HAP nucleic acid cerd, producing HAP; by culturing a host cell transformed with the CC expression vector, a composition comprising a pharmaceutical carrier and CC expression vector, a composition comprising a pharmaceutical carrier and CC expression vector, a composition comprising a pharmaceutical carrier and CC expression vector, a composition comprising an antibody capable of binding to CC HAP, inducing an immune response in a patient by administering as CC expression, a composition comprising an antibody capable of binding to the peptides. CC The Haemophilus adhesion and penetration (HAP) protein is useful as a CC vaccine for prophylactic or therapeutic treatment of an H. influenzae cC infection (e.g. influenza), in generating an immune response in a patient, and in generating antibodies to the HAP protein. The antibodies co the HAP protein in a generate HAP proteins or the H. influenzae of H. influenzae infection in a composition of the H. influenzae organism from a sample. The constant contraction of the H. influenzae organism from a sample. The Query Match Best Local Sim Matches 3401; New recombinant Haemophilus adhesion and penetration protein, useful as a vaccine for prophylactic or therapeutic treatment of a Haemophilus influenzae infections, in generating antibodies for passive immunization. WPI; Sequence 4605 BP; 1577 A; 782 C; 953 G; 1293 T; 0 U; 0 Other; Claim 1; Fig 18; 149pp; English. present sequence is a HAP gene from a strain of H. influenzae The invention relates to a new recombinant Haemophilus adhesion and P-PSDB; ADA09352. 2003-567308/53. 480 TACCATAATCCACGATTACATAAATTCGTTACAGAAGCGGCTCCAATTGATATGACTTCG 539 542 420 722 360 662 300 602 240 180 482 120 TCGCAAGCGTGGGCTGACACTTATTTTGGGATTGATTACCAATATTATCGTGATTTT 179 422 782 TATAAAGTTGTTAAACGATATAATTATAAGAGCGGTGATAGACAATATAAT-----GAT 835 69 μ Similarity ATGAAAAAACTGTATTTCGTCTTAATTTTTTTAACCGCTTGCATTTCATTAGGGATAGTA 119 TCAATAGTCGTTTAACTA-GTATTTTTTAATACGAAAAATTACTTAATTAAATAAACATT 59 TATAAGATTGTAAAACGAAATAACTACAAAAAAGATAATTTACATCCTTATGAGGACGAT 479 GGGTATGATGTCGTTGATTTTGGTATGGAGGGGGGAAAATCCAGACCAACATCGTTTTAAG 781 CGTGGTGGTTATTCAACATTGATAAGTGAGCAGCATTTAATTAGCGTCGCACATAATGTA 721 CGTAACGGCGTGGCAGCCTTGGTTGAAAATCAATATATTGTGAGCGTGGCACATAACGTA 359 GGGGAAATGATAGGTACGATGATGAAAGGTGTGCCTATGCCTGATTTATCTTCCATGGTT 661 GCCGAGAATAAAGGGAAGTTTACAGTTGGGGCTCAAGATATTGATATCTACAATAAAAA 601 ATGAAAAAACTGTATTTCGTCTGAATTTTTTAACCGCTTGCATTTCATTAGGGATAGTA. 481 TCGCAAGCGTGGGCAGGTCATACTTATTTTGGGATTGACTACCAATATTATCGTGATTTT 541 Conservative 62.7**%**; 79.4**%**; 0; Mismatches 809; Indels 76; Gaps Score 2709.6; Pred. Claim 14; SEQ ID NO 29527; 1766pp; English

the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: ftp.wipo.int/pub/published_pct_sequences a vector comprising a promoter operably linked to the nucleic acid The invention relates to an isolated nucleic acid comprising any one of

The antigenic proteins, their fragments, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 4350 BP; 1225 A; 1161 C; 1060 G; 842 T; 0 U; 62 Other;
